Modul Žan Mone EMIMI – Multidisciplinarne studije o integracijama i migracijama kroz interkulturalni dijalog
(Multidisciplinary studies on integration and migration through intercultural dialogue)
2021–2024

Obuka: Krićka analiza političkog i medijskog diskursa

Animator predavać: doc. dr Sonja Špadijer

Period: oktobar 2023. – maj 2024.

Osmišljena kao nastavak radionice *Hyperbase*, obuka ima za cilj kreiranje multidisciplinarnog istraživaćkog tima predavaća i njihovo osposobljavanje za realizaciju kvalitativne socio-linkvistićke obrade prikupljenih tekstualnih podataka odnosno baza.

Obuka podrazumijeva uvod u teorijski dio i metodologiju istraživanja u oblasti krićke analize diskursa.

Metodologija kvalitativne analize diskursa oslanja se na krićku analizu političkog i medijskog diskursa.

Istraživaćki rad u timu djelimićno se oslanja na logometrijsku metodu u okviru *Hyperbase* platforme za statistićku obradu teksta.

Materijali pripremljeni za obuku organizovani su u formi power point prezentacija i sažetih šematskih prikaza teorijskih dostignuća praćeni adekvatnim primjerima. Osmišljeni su da olakšaju kvalitativnu analizu teksta za poćetnike u toj oblasti kao i za istraživaće iz oblasti društvenih i drugih nauka.

Oćekivani ishodi ove aktivnosti priprema naućnih radova koji bi se prezentirali na naućnim konferencijama i objavljivali u naućnim časopisima.

Eng.

Training: Critical analysis of political and media discourse

Trainer: Assistant professor Sonja Špadijer

Training, period of time: October 2023 – May 2024.

Conceived as a continuation of the *Hyperbase* workshop, the training aims to create a multidisciplinary research team of lecturers and train them to perform qualitative socio-linguistic processing of collected textual data.

The training includes an introduction to the theoretical part and research methodology in the field of critical discourse analysis.

The methodology of qualitative discourse analysis relies on critical analysis of political and media discourse.

The team's research work is partially based on the logometric method within the Hyperbase platform for statistical text processing.

The materials prepared for the training are organized in the form of power point presentations and concise schematic representations of theoretical achievements followed by adequate examples. They are designed to facilitate qualitative text analysis for beginners in the field as well as for researchers in the social and other sciences.

The expected outcomes of this activity are the preparation of scientific papers that would be presented at scientific conferences and published in scientific journals.
